Repository Structure

tapestry_takehome · data flows top to bottom · build.py runs every step

Input: **`data/raw/TYLY_data_sample.xlsx`** (excluded from the repository)

▼

1. Calculation · core/	
`periods.py`	Reporting date and time windows; last year matched on fiscal week and weekday
`metrics.py`	One definition per measure; breakdowns, drill-downs, weekly trend
`inventory.py`	Weeks of stock left and stock status per product family
`headlines.py`	One-sentence summary per section, generated by fixed rules

▼

2. Evidence · what the AI can see	
`core/facts.py`	246 named values for the weekly and stock briefs
`core/scan.py`	Fixed rules that flag groups whose weekly sales trend stands out
`core/tools.py`	4 query tools for the chat, with parameter checks
`core/opportunity.py`	Fixed rule that selects the growth opportunity

▼

3. AI · ai/	
`prompts/`	Writing rules for each AI output
`prompt_input*.txt`	Full model input: rules plus values or tool list (generated by the build)
`recorded/`	Model output with placeholders instead of numbers, stored per week

▼

4. Checks	
`core/brief.py`	Validates every AI sentence against the values before publishing
`build.py`	Stops if any breakdown does not add up to its total
`tests/`	27 unit tests covering periods, checks, tools, the trend rules and the opportunity rule

▼

5. Display	
`templates/index.html`	Page layout and charts; no data
`dist/index.html`	Built page with data embedded; re-checks AI text on load; shows the source of each number on hover

Documentation: README.md (overview and usage) · data/README.md (data location and notes) · docs/build-log.md (decisions and AI checks)
